

# Primal Pro Series Olympic Smith Machine

£1,760.00

## Product Images

## Short Description

A smooth movement is essential for any commercial Smith machine whether you use for chest press, squats or even shoulder presses. With its commercial grade bearings, the travel is very smooth and easy - whatever the weight you put on the bars.

With a knurled grip on the bar, spotter catchers you can set in a number of positions to get your desired height and 6 weight horns for Olympic weights, the Primal Pro Series Olympic Smith Machine can be used at home or in commercial gyms. The bar weighs in at 20kg, you get an extended frame depth to accommodate any bench and it is finished off in a matte black colour.

## Using A Smith Machine

A great way to get to grips with squats and chest press if you're working out on your own, as the safety catches work by rotating the bar slightly to catch the pegs. This means you can use heavier weights when you're on your own either at home or in the gym.

Primal Strength have manufactured the Pro Series Olympic Smith system to a high standard, but the price offers excellent value for money.
