Short Description

Hammer Strength Curved Treadmill

Choosing a self-powered curved treadmill provides you with more freedom over your running. No restrictions of motor speed or power, the curved belt responds to you. From acceleration training to sprinting or just paced running or walking - whatever speed you want - this Hammer Strength Treadmill adjusts to exactly what you want.

It's slatted curved running deck design offers a smooth and comfortable running experience and as it is self-powered you are also having to work harder than a traditional treadmill.

Athlete Focussed

Whether you want sprint training, high tempo intervals or just a smoother running experience, the Hammer Strength slatted and curved running deck is the perfect foundation - resembling the sprinting mechanics

much better than a more traditional flat bed treadmill.

The curve of the running deck allows you to control your speed by moving up the curve for faster and back down the curve to slow. This means you can go from full speed sprinting and full on acceleration as quick as your legs can take you.

The Important Metrics

With its integrated LCD console you can see all the expected performance metrics including time, distance, speed, pace, watts, calories and heart rate.

The durable design of the heavy-duty support arms support a wide range of athletes, and built-in transport handles and wheels allow for easy transportation and facility configuration.

HD Performance Trainers

Part of a suite of HD performance machines, Hammer Strength want to help you get the most from your workouts - not just this HD curved treadmill.
